

ResolveDesk AI — Platform User Manual

Core Features & Navigation

Workspace Board Views

ResolveDesk supports three primary views:

1. Kanban Board: Drag-and-drop tasks across columns (To Do, In Progress, Review, Done).
2. List View: A spreadsheet-style tabular list ideal for editing multiple tasks at once.
3. Gantt Timeline: A timeline chart showing roadmaps, task durations, and milestones.

Task Management

Creating Tasks: Click '+ Add Task' in any column, enter a task name, and press Enter.

Assignees & Dates: Double-click a card to assign team members, set dates, and attach priority tags (Low, Medium, High).

Dependencies: In Gantt view, click and drag the connector line from the end of one task block to another to enforce execution order.

Checklists: Break down large tasks into smaller items. Expand a task detail pane and add checklist rows.

Advanced Features & Task Automations

Enabling Automated Task Rules

Users can build lightweight rule automations to reduce manual coordination clicks. Navigate to Board Settings > Automations > Rules. Click 'Create Rule' to specify triggers (e.g., 'When task moves to Done') and matching outcomes (e.g., 'Mark checklist complete and assign to Project Owner'). Rules are limited based on your subscription tier.

Exporting Workspace Data formats

Project data can be exported at any time. Click Workspace Settings > Export Data. Select from JSON format, CSV format, or PDF reports format. Workspace files and images are exported as a consolidated ZIP package.
